List of Figures and Tables	XIII
Introduction	XVII
<i>Franca Cantoni, Edoardo Favari</i>	
Part I: Main Challenges	
1. The Human Side of Megaprojects: Leadership Style and Traits to Face Growing Levels of Complexity and Uncertainty	3
<i>Roberta Virtuani, Barbara Barabaschi, Franca Cantoni</i>	
1.1. Introduction	3
1.2. Organization and HR in megaprojects: the Human Side of Megaprojects	5
1.3. The Six Paradoxes of Leadership Traits	8
1.4. Methodology: Applying storytelling and the narrative approach to project management research and practice	11
1.5. Stories and narratives	13
1.5.1. The Managing Director of the Mediterranean Rail Freight Corridor (Med-RFC)	13
1.5.2. The Project Manager of a High-Speed Trains and Locomotives Company	15
1.6. Findings	17
1.7. Conclusions	21
2. Proposing a Sustainability-Centered Approach to Overcome Critical Issues in Megaprojects	25
<i>Andrea Caccialanza, Franca Cantoni, Edoardo Favari, Costanza Mariani</i>	
2.1. Introduction	25
2.2. Scenario	26

	<i>page</i>
2.3. Project management and sustainability: the key connection	28
2.4. Methodology	29
2.5. Triple bottom line sustainability in megaproject management	31
2.6. Strategic approach introduction of sustainability principles	34
2.7. Outputs and Results expected from the application of 3P Principles	35
2.8. The project manager's responsibilities and the decision-making process	37
2.9. Findings and further steps	39
3. Use and Misuse of Input-Output and SAM Multipliers: Where are we Standing?	45
<i>Raffaele Colaizzo, Jérôme Massiani</i>	
3.1. Introduction	45
3.2. Multipliers are a key argument in public discussion on economic policies	46
3.2.1. Playing with numerators and denominators	49
3.2.2. Neglecting Substitution effects: Alien money	51
3.2.3. The blind spot of IO: capital accumulation and the future	52
3.2.4. The indirect (and induced) effect fallacy	53
3.2.5. The indeterminacy of results, when only arbitrariness tells which accounts are endogenous or exogenous	53
3.2.5.1. Adapting the multiplier to the nature of the shock	54
3.2.5.2. Decomposing single accounts into endogenous and exogenous components	55
3.2.5.3. More attention is needed on the choice of endogenous accounts and on the balance of the simulated SAM	55
3.3. A realistic application of IO multipliers in the context of the Recovery Plan in Italy	56
3.3.1. Naïve sales multiplier	57
3.3.2. Naïve added value multiplier	58
3.3.3. Residual debt and taxation	59
3.3.4. A complex situation: EU recovery funding multipliers	61
3.4. Conclusions	63
Appendix. A Social Accounting Matrix (SAM) standard structure	67

	<i>page</i>
4. Infrastructural Investments and Their Impact on SDGS	69
<i>Francesco Timpano, Silvia Platoni</i>	
4.1. Brief survey on the relationship between investment in infrastructure and development/GDP growth	69
4.2. The issue of the compatibility of infrastructure and sustainability	70
4.3. Preliminary quantitative remarks	71
4.4. Lesson drawn from the study of the relationship between infrastructure and sustainability	75
5. Post Pandemic Green Tax Policies: How to Make Megaprojects Sustainable	79
<i>Marco Allena</i>	
5.1. Introduction: purpose of this work	79
5.2. Methodology and approach	83
5.3. Findings and research results	83
5.4. Originality: megaprojects and sustainability-oriented taxation	84
5.5. Research implications and limitations	85
6. The Relevance and Limits of Taxation as an Aid to Foster Megaprojects	89
<i>Paolo Arginelli</i>	
6.1. Introduction	89
6.2. The classical division of government budget functions and the role of taxation	90
6.3. The foundational principles of modern national tax systems	94
6.3.1. The appropriate design of a tax system	94
6.3.2. Equity and distributive justice	95
6.3.3. Simplicity	98
6.3.4. Efficiency	99
6.3.5. Neutrality	100
6.4. Devising an optimal tax system: trading off its foundational principles	101
6.5. Government incentives: direct spending or tax expenditures?	104
6.6. Legal constraints and conclusions	106

	<i>page</i>
7. Megaprojects Contracts and Pandemics: from Law to Private Autonomy	111
<i>Francesco Zecchin</i>	
7.1. Pandemic, government restrictions and contracts	111
7.2. Before Covid-19: international models (Fidic or NEC) and contract law	112
7.3. After Covid-19: international model (Fidic or NEC) and contract law	117
7.4. The private autonomy's chance	119
 Part 2: Cases	
8. Insights into the Cost-Benefit Analysis of an Intermodal Logistic Terminal	127
<i>Antonio Dallara</i>	
8.1. Introduction	127
8.2. Project description	129
8.3. Scenarios analysis	130
8.3.1. The all-road scenario	131
8.3.2. The rail scenario	133
8.4. Demand analysis	135
8.4.1. Current freight flows	135
8.4.2. Potential demand	136
8.5. Financial analysis	137
8.5.1. Investment costs	138
8.5.2. Incremental operating costs and revenues of the new cargo rail mission	139
8.5.3. Results of the financial analysis	139
8.5.4. Sources of finance	140
8.6. Economic analysis	140
8.6.1. Direct impacts	141
8.6.2. Externalities	142
8.6.3. Results of the economic analysis	143
8.7. Risk analysis	143
8.8. Conclusions	144

9. Forecasting the Success of Hyperloop Technology on Italian Routes: a Broad Feasibility Study	147
<i>Roberto Maja, Edoardo Favari, Costanza Mariani</i>	
9.1. Introduction to Hyperloop	148
9.2. What is Hyperloop?	149
9.2.1. Hyperloop history	149
9.2.2. The infrastructure	150
9.2.3. The vehicle (capsule)	150
9.2.4. Regulation	153
9.3. Methodology	153
9.3.1. Transportation Demand analysis	153
9.3.2. Analysis	155
9.3.3. Questionnaire	156
9.3.4. Sensitivity Analysis	158
9.4. Financial Analysis	160
9.4.1. Construction cost	160
9.4.2. Operating cost	164
9.4.3. Financial main results	166
9.5. Economic Parameters	168
9.6. Stakeholders Analysis	170
9.6.1. Five Interviews to selected stakeholders	171
9.7. Preliminary considerations	173
9.8. Conclusions and further development	174
10. Bridge or Tunnel? A Study of the Spillover Effects on Strait of Messina Metropolitan Area	177
<i>Domenico Marino, Giuseppe Quattrone, Domenico Tebala, Francesco Timpano</i>	
10.1. Relationship between investment in transport infrastructure and regional growth	177
10.2. The debate around a stable linkage between Sicilia and Calabria	181
10.3. Conceptual diversity between the bridge and the tunnel: two alternatives for the integration of the two territories	183
10.4. The maritime connections for crossing the Strait of Messina: data about the current situation of the traffic	185
10.5. A broad evaluation of the economic impact of the infrastructure	187
10.6. Final considerations about the alternatives	190

	<i>page</i>
11. Project Management and Building Information Modelling Interactions in Large Building Projects. The Galliera Hospital Case Study	195
<i>Enea Sermasi, Barbara Frascari</i>	
11.1. The Hospital Project	195
11.2. Design Deliverables	196
11.3. The Design Lifecycle	197
11.4. Complexity of Stakeholders	199
11.5. Design Organisation	200
11.6. Project Management Methods & BIM tools	201
11.7. BIM dimensions and Project Management	203
11.8. Issues on the Critical Path	204
11.9. Project Management specific for Hospital Projects	205
11.10. Lessons Learnt on Project Management and BIM tools	208
11.11. Conclusions	210
 <i>Index</i>	 213

LIST OF FIGURES AND TABLES

page

Figures

Chapter 1

Figure 1. The six paradoxes of leadership 9

Chapter 2

Figure 1. SLR framework scheme adopted and results (the extraction from Scopus database was conducted on April 2021) 30

Chapter 3

Figure 1. Existing and/or published matrices for Italy: 48
1.a Censed Input-Output matrices in Italy 48
1.b Censed Social Accounting Matrices in Italy 48
Figure 2. Impact of Italian RRP (Construction phase, billion euro) 63

Chapter 4

Figure 1. Direct and indirect influence of infrastructure on SDG targets 72
Figure 2. The Sustainable Competitiveness World Map (SolAbility, 2014-2019) – light grey areas indicate high competitiveness, dark grey areas low competitiveness 73
Figure 3. The Global Sustainable Competitiveness Index Vs. Rail and Road Investments 73

Chapter 9

Figure 1.	Modal split of demand for the Rome-Milan route	156
Figure 2.	Three different scenarios (1.A; 6.B; 3.D) proposed in the questionnaire	157
Figure 3.	Variation of the probability of choice depending on the ticket prices	158
Figure 4.	Socio-demographic characteristics of the sample	158
Figure 5.	Sensitivity analysis conducted on selected parameters	159
Figure 6.	Features of the Milan-Rome route	163
Figure 7.	Construction costs of the Hyperloop for the Milan-Roma route	163
Figure 8.	Operating costs of the Hyperloop for the Milan-Rome route	164
Figure 9.	Break-even point analysis for the Milan-Rome Hyperloop	166
Figure 10.	Main costs of the externalities identified in literature	168
Figure 11.	Costs of externalities for the Milan-Rome Hyperloop	169

Chapter 10

Figure 1.	Motorways km per 1000 sq. Km of territorial surface	180
Figure 2.	Railways km per 1000 sq. Km of territorial surface	180
Figure 3.	Graphic representation of the different stable crossing infrastructure of the Strait	184
Figure 4.	Number of trips on Strait of Messina (2016-2019)	185

Tables

Chapter 2

Table 1.	Key parameters for a more structured introduction of sustainability in megaproject management, literature review	32
----------	--	----

Chapter 3

Table 1.	Simulated impact of a 100 million euro demand shock on sales	58
Table 2.	Simulated impact of a 100 million euro demand shock on value added	59

	<i>page</i>	
Table 3.	Simulated impact (estimated through SAM multipliers) of a 100 million euro demand shock considering different funding assumptions	60
Table 4.	Impact of Italian RRP implementation (demand effects). Billion euro	62
 Chapter 4		
Table 1.	Pairwise correlation coefficients	74
Table 2.	Coefficients estimation	74
 Chapter 8		
Table 1.	Sources of information for kind of cost	132
Table 2.	Potential volume on one train for kind of goods	137
 Chapter 10		
Table 1.	Number of trips a day (2019)	185
Table 2.	Annual transport demand on Strait of Messina (2019)	186
Table 3.	Distribution of long-distance journeys by mode of transport	186
Table 4.	Tariffs for freight vehicles, passenger cars and coaches applied in the Strait of Messina (2019)	187
Table 5.	I/O Matrix – Gross Domestic Production (Milion Euro) – year 2016	188
Table 6.	Income growth evaluation using I/O Table (MUS\$ ref. 1993)	189
Table 7.	Increase in income following the construction of stable infrastructure facilitating crossing (MUS\$ ref. 1993)	189
Table 8.	Sectoral multiplier matrix	189
Table 9.	Income growth evaluation using I/O Table (Milion Euro ref. 2020)	190
