Introductory remarks. Advancing State responsible behaviour in outer space from an interdisciplinary perspective	1
<i>Claudia Cinelli</i>	
1. Does using satellite data for sustainable development justifies unsustainable use of outer space?	7
<i>Katarzyna Pogorzelska</i>	
1. Introduction	7
2. Sustainability of outer space	8
3. Space activities	10
4. Commercialisation of outer space and growing space economy	11
5. The scope of the environmental debate in space economy	12
5.1. Orbital congestion	13
6. Contribution of space to sustainable development on Earth	15
7. Space data	16
7.1. Relevance of space data for sustainable development	16
7.2. Decreasing marginal benefits of growing volume of space data	17
7.3. Issues with space data	18
7.3.1. Environmental issues related to space data	18
7.3.2. Technical issues related to space data	20
7.4. From satellite data to satellite launch	21

	<i>page</i>
8. Conclusions	22
<i>References</i>	22
2. Sustainability and Corporate Social Responsibility (CSR) in outer space	27
<i>Elena Cirkovic</i>	
1. Introduction	27
2. Earth's planetary boundaries and outer space	29
3. Outer space law and sustainability	30
4. State liability and Corporate Social Responsibility (CSR)	34
4.1. Connecting planetary boundaries and outer space activities	44
5. Conclusion	45
<i>References</i>	46
3. Business, human rights and international space law: filling the gaps of corporate accountability in the 'new space'	51
<i>Chiara Macchi</i>	
1. Introduction	51
1.1. Impacts on Earth and in outer space	53
1.2. Time to discuss the business and human rights implications	56
2. Eclipsed? Corporations and corporate accountability under international space law	58
2.1. Private commercial activities under the space treaties	60
2.2. Implementation and enforcement challenges	64
2.3. Space resource mining and the risks of unilateral approaches	66
3. 'Wherever they operate': relevance of the 'business and human rights' framework to commercial activities in outer space	71
3.1. The French Law on the Duty of Vigilance: relevance and applicability to business activities in outer space	75
3.2. Corporate liability for the impacts of their outer space activities: can due diligence laws help fill the gap?	80
3.3. Damage caused by space objects: is the LDV's civil liability mechanism applicable and useful?	82
4. Conclusion	85
<i>References</i>	87

	<i>page</i>
4. The principle of ‘Common Heritage of (Hu)mankind’: its implementation in the light of the law of the sea and the law of outer space	93
<i>Anne-Sophie Martin</i>	
1. Introduction	93
2. The environmental perspective of the CHM principle	98
3. Implementation of the constituent elements of the CHM principle under the Law of the Sea	102
3.1. The application of the CHM principle to the High Seas and the Area	102
3.2. The role of the International Seabed Authority in the ‘operationalisation’ of the CHM principle	103
4. The debate on the application of the CHM principle in outer space	106
4.1. Two concepts under the regime of outer space law: the “Province of all Mankind” and the “Common Heritage of (Hu)mankind”	106
4.2. Environmental consideration in the space legal framework	108
4.3. The challenges of space mining activities	111
5. Conclusion	114
<i>References</i>	114
5. Rights without remedies? The role of arbitration in enforcing international space law for private parties	119
<i>Laura Yvonne Zielinski</i>	
1. The growing commercialization of space activities	119
2. The State at the center of international space law	120
3. Remedies only accessible to States	125
4. The importance of international arbitration	127
5. Conclusion	133
<i>References</i>	133
6. National space laws and regulations stemming from international space law	135
<i>Emanuela Maio</i>	
1. Introduction	135
2. Outer space law: a brief overview	136

	<i>page</i>
3. The regulation of space-related activities at domestic level: Italy as case study	143
3.1. What is missing in Italian legal system? The answer according to a reading of the current private legal system	144
4. Reflections on the (draft) Italian space law	148
<i>References</i>	149
7. Nuclear power sources in outer space for peaceful purposes: an evolving legal framework	153
<i>Viviana Iavicoli</i>	
1. Energy as an essential factor for the exploration of celestial bodies and colonization of the Moon and Mars	153
2. Is the current legal framework adequate for the future technological advances?	156
2.1. The international legal regime and the role of the consultation and notification	156
2.2. <i>Ad hoc</i> and non-binding instruments	164
3. Conclusion	170
<i>References</i>	171
Concluding remarks. Recognizing and addressing the challenge of interdisciplinary collaboration, design, and governance in sociotechnical systems	173
<i>Katlyn M. Turner</i>	
<i>Index</i>	187
